

BUILDERS LEVEL · SEMESTER 2

Weather Helper

Student Workbook

Code can use information to decide — and CSS makes our pages look great.

Name: _____

THEORY

CSS Adds Style; Data Helps Us Decide

HTML **builds** the page; **CSS styles** it. Two CSS properties: **color** sets the text colour and **font-size** sets how big text is. A helpful page can also read **data** (like the weather) and **decide** what to say: *if it is raining, then bring an umbrella*.

Talk with your teacher: What data does a weather app use to decide what you should wear?

Style a heading

Draw a heading two ways: once small and grey, once big and blue. Which is easier to read?

1

Tags & blocks we use:

color: (CSS) font-size: (CSS) if () then <h1> <p> data

Words we are learning

- **CSS** — the code that **styles** a page (how it looks).
- **color** — a CSS property that sets the text colour.
- **font-size** — a CSS property that sets how big text is.
- **Data** — information, like today's weather.
- **If-then** — a decision: *if this, then* do that.

Name: _____ Date: _____

Style It With CSS

CSS changes how the page **looks**. Match each property to what it changes.

color	the colour of the text
font-size	how big the text is

Circle the property that makes text bigger:

font-size

color

Name: _____ Date: _____

Read The Weather Data

Weather is **data**. Read the pattern, then circle the right advice.

Sunny and warm	wear a coat / wear a t-shirt
Rainy	bring an umbrella / bring sunglasses
Cold and windy	wear a coat / wear shorts

Circle the choice that matches the weather data.

Name: _____ Date: _____

If-Then Rules

A helper **decides** using if-then. Finish each rule.

If it is raining, then wear...

If it is sunny, then wear...

If it is snowing, then wear...

Name: _____ Date: _____

Design My Colours

Choose the **color** and **font-size** for your Weather Helper.

--	--	--	--

Colour each box a colour you want on your page.

The color I will use for my heading:

Big or small font-size for my heading? Circle one:

big	small
-----	-------

Name: _____ **Date:** _____

PROJECT

Weather Helper — Plan

You will build a page that reads the weather and tells the user what to wear — styled with CSS. Plan it first.

1. Which kinds of weather will my helper check?

2. My if-then advice for two of them:

3. My CSS choices — color and font-size:

4. Draw my Weather Helper page:
