

DEVELOPERS LEVEL · SEMESTER 3

Fact or Fake? Media-Literacy Quiz

Student Workbook

if/else lets code decide — and helps us decide what to trust online.

Name: _____

THEORY

If/Else Decides — And So Must You

if / else lets code choose a path based on a test that is **true** or **false**. A quiz stores questions in an **array** and checks each answer. Beyond code: **algorithms** amplify content to keep you watching, and **misinformation** (including AI-generated media) can look real. The skill is to check the source before you trust or share.

Discuss: why might a true-looking post still be fake, and how could you check it?

Trace it

Read the code and give the result.

```
let answer = "B";
```

```
if (answer == "B") { score = score + 1; }
```

```
else { console.log("Let's review this one."); }
```

If answer is "B", what happens? _____

Code we use:

if / else

true / false

array

== (equals)

onclick

function

Words we are learning

- **Conditional** — if / else chooses what to do based on a test.
- **Boolean** — a value that is true or false.
- **Array** — an ordered list of values: [q1, q2, q3].
- **Misinformation** — false or misleading information spread online.
- **Algorithm** — the rules a platform uses to decide what to show you.

Name: _____ Date: _____

If / Else Decisions

if runs when a test is true; else runs otherwise. Complete each condition.

```
if (score ____ 5) { console.log("You passed!"); }
```

```
else { console.log("Try again."); }
```

Fill the blank so 'passed' shows at 5 or more:

Write an if that checks if answer equals "A":

```
if (answer ____ "A") { }
```

Name: _____ Date: _____

Booleans: True or False

A **boolean** is true or false. Mark each statement.

An array can hold many values	true / false
if/else can only print text	true / false
A source you can verify is more trustworthy	true / false

Write a boolean variable that means the answer was correct:

```
let correct = _____;
```

Name: _____ Date: _____

Spot The Fake

Media literacy: decide **real** or **needs checking**, and note how you would verify.

A screenshot with no source	needs checking
A report from a known news site	more likely real
A shocking headline urging you to share NOW	needs checking

Two ways to check if something online is true:

Name: _____ **Date:** _____

Plan My Media-Literacy Quiz

Plan a quiz that trains players to spot fakes.

My questions (array of 3):

```
let questions = [ ____, ____, ____ ];
```

Correct answers:

Feedback with if/else (right vs review):

Name: _____ **Date:** _____

PROJECT

Fact or Fake? — Plan

Build a quiz game that trains players to spot misinformation: store questions in an array, check answers with if/else, and teach one way to verify a source.

1. Topic of my quiz:

2. Questions (array):

```
let questions = [ _____ ];
```

3. How I check answers (if/else):

```
if (answer _____ correct) { }
```

4. A verifying tip my quiz teaches:
